AW SUMMIT – China Humanoid Conference

At AW 2026, the AW SUMMIT China Humanoid Conference was held for the first time in Korea. The conference lineup included China's leading humanoid robot manufacturers such as AGIBOT, Unitree, Fourier, Leju, alongside Huawei - a key player providing core embedded intelligence and humanoid robot software technologies.

- Approximately 1,000 visitors and over 100 media representatives attended the conference

Coex Opens AW 2026, Accelerating AI-Driven Industrial Transformation

This year's edition marked the largest edition ever, featuring 500 companies from 24 countries across 2,300 booths, with 80,000 visitors expected

SEOCHO-GU, SEOUL, SOUTH KOREA, March 4, 2026 /ENPresswire.com/ --
 - Boston Dynamics "Atlas" (non-commercial model) to be unveiled to the public in Korea for the first time
 - Launch of AI Factory Pavilion and the first-ever China Humanoid Robot Conference
 - More than 200 specialized conferences held concurrently, covering industrial intelligence and AI-driven autonomous manufacturing
 - Expanded demonstrations of humanoid and logistics robots, presenting real-world applications in manufacturing environments

Coex President Jo Sang Hyeon announced that "Smart Factory + Automation World(AW) 2026, Asia's leading manufacturing AX expo, will take place from March 4 to 6 at Coex, Seoul. The three-day event will occupy the entire Coex venue and mark the largest edition in the show's history."

Under the theme "Autonomy, the Driver of Sustainability," AW 2026 signals a strategic shift from a traditional smart factory and digital transformation(DX) focused exhibition to a next-generation industrial platform centered on AI and humanoid-driven autonomous manufacturing.

This year's exhibition will feature 500 companies from 24 countries across 2,300 booths, showcasing advanced AI-powered manufacturing

and automation technologies. Key highlights include AI solutions for manufacturing, humanoid robotics, industrial and collaborative robots, digital twins, machine vision technology, and sensor technologies – demonstrating how AI is transforming the smart manufacturing ecosystem.

At the Smart Factory + Automation World 2026 (AW 2026) in Seoul, the exhibition floor offered a clear view of how industrial automation is evolving toward AI-driven autonomous production systems. Demonstrations ranged from edge AI computing platforms and high-speed motion systems to collaborative robots and digital twin environments. Together, these technologies illustrate how manufacturers are bringing intelligence closer to the production line while integrating sensing, networking, and control into more unified automation architectures.

This on-site roundup highlights several notable technologies and system demonstrations from the show floor, reflecting the broader shift toward edge-centric AI, intelligent sensing, and software-defined industrial automation.
